NGUYEN DUC VY

PROFESSIONAL SUMMARY

ICT Business Analyst with a strong computer science foundation, experienced in translating operational and reporting needs into clear requirements, process maps, and functional specifications for software and data solutions. Hands-on experience includes requirements elicitation, gap analysis, BPMN process modelling, BRD/FRD documentation, and UAT support across AI, SAP ERP, and mining-sector case studies.

Comfortable working in Agile teams, using tools such as Jira, Confluence, SQL, and Power BI to support data-informed decisions and bridge communication between business stakeholders and technical teams. Multilingual in English, Vietnamese and Japanese, currently completing an ACS Professional Year in IT and pursuing ECBA, and seeking ICT Business Analyst roles in Perth.

KEY SKILLS

- Business Analysis: Requirements elicitation, stakeholder interviews, user stories, use cases, gap analysis, BRD/FRD, acceptance criteria, UAT support.
- Process & Methods: BPMN (AS-IS/TO-BE), Agile/Scrum, sprint ceremonies, backlog management, data-informed decision-making.
- Systems & Data: SAP ERP (ABAP reporting), SQL, Excel (lookup, pivot), Power BI, PostgreSQL, Git/GitHub.
- Tools: Jira, Confluence, VS Code, GCP/Docker (for delivery workflows and environments).
- Communication: Cross-functional collaboration, technical documentation for business and technical audiences, multilingual stakeholder engagement.

KEY ACHIEVEMENTS

- Led a WA mining operations case study from problem definition through AS-IS/TO-BE BPMN mapping, requirements catalogue, data dictionary, and executive-level Power BI reporting.
- Supported an AI image detection project for a real client by eliciting requirements, analysing datasets, and producing functional specifications and test cases used by the delivery team.

- Documented and automated SAP ERP reporting workflows, reducing manual effort, and improving timeliness of operational reports for enterprise stakeholders.

PROFESSIONAL EXPERIENCE

Software Developer Intern – Spirited Thinking (Access Labs Program)

Perth, WA | Jul 2024 – Nov 2024

- Analysed image datasets and prepared functional specifications and test cases for an AI image classification project, eliciting requirements from Spirited Thinking and client Botlab and documenting success criteria.
- Collaborated with developers and data scientists to clarify scope, success metrics, and constraints, helping align business expectations with technical delivery.
- Contributed to backlog refinement and defect triage, ensuring issues were clearly described and traceable to requirements and test cases.

SAP Developer Intern – FPT Information Systems

Ho Chi Minh City, Vietnam | May 2017 – Aug 2017

- Documented client reporting and data processing requirements through stakeholder meetings and analysis of existing SAP workflows.
- Designed and implemented SAP ABAP reports to automate critical data workflows, reducing manual effort and improving reporting timeliness.
- Collaborated with functional consultants to validate report outputs against business rules and adjust logic based on user feedback.

OTHER EXPERIENCE (TRANSFERABLE SKILLS TO BA)

Culinary Assistant – La Cucina

Perth, WA | March 2023 - Present

- Collaborated with cross-functional catering teams in a fast-paced, high-volume environment, ensuring procedural compliance while identifying bottlenecks and documenting process improvements.

Warehouse Stock Coordinator – 88 Supermarket

Vancouver, Canada | Dec 2021 – Sep 2022

- Managed inventory tracking and stock reconciliation, ensuring accurate logistics data while coordinating with suppliers and stakeholders to resolve discrepancies.

Receptionist – Rang Dong Hotel

Ho Chi Minh City, Vietnam | Jan 2020 – Jun 2020

- Delivered front desk stakeholder support by managing customer enquiries, issue resolution, and information recording.

PROJECTS

WA Mining Operations Dashboard – ICT Business Analyst Case Study

- Initiated an end-to-end business analysis case study for WA's resources sector, identifying the problem that stakeholders relied on static reports to monitor major mining project pipelines and framing the solution as an interactive portfolio dashboard.
- Defined stakeholder questions and structured requirements using Notion documentation and Jira user stories, covering portfolio composition by commodity, region, stage and operator, and downstream capacity alignment with upstream development.
- Designed a data model at site-level grain (SITE_CODE as primary key) with a 19-field schema, mapping the relationship that multiple sites (MINE, INFRASTRUCTURE, OTHER) map to a single project code (PROJ_CODE), and produced a data dictionary describing all fields, data types and value distributions.
- Built a 5-step SQL pipeline in PostgreSQL (raw table creation, data cleaning, cleaned data insertion, summary view creation, portfolio summary aggregation), addressing issues such as inconsistent LGA naming (e.g., stripping "SHIRE OF" suffixes) and segmenting mixed asset types using TARGET_GROUP_NAME and SITE_TYPE.
- Developed a two-page Power BI dashboard (Overview + Regional/Operational View) using DAX measures including DISTINCTCOUNT vs COUNTROWS to correctly separate project counts from site counts, with slicers for commodity, region, stage and company; key finding: gold projects represent ~47% of the portfolio (65 of 139), with clustering in the Pilbara, Goldfields and Mid West.
- Repository: github.com/tonynguyen1292/WA_Mining

Healthcare – Mental Health Treatment Gap Analysis (Data Pre-Launch)

Data Sourcing, Data Preparation, Excel, Power BI (planned) | Personal Project | May 2026

- Defined the business problem as analysing the mental health treatment gap in Western Australia, framed around three themes: financial barriers to care, rural/remote access inequity, and systemic failures in service delivery.
- Sourced and consolidated seventeen national mental health survey data tables from the ABS/AIHW National Survey of Mental Health and Wellbeing, covering lifetime disorders, 12-month disorder groups, self-harm behaviours, psychological distress, PBS medication dispensing, consultations via health professionals, digital health access, and suicidal thoughts and behaviours.
- Organised raw data into three structured folders (Mental-health-tables-National, Mental-health-tables-State-and-territory, Modelled-estimates-from-NSMHW-by-PHN) to support future comparison between national, state-level and Primary Health Network (PHN) views of treatment access.
- Planned the analytical pipeline to progress from raw Excel data into SQL data modelling and Power BI dashboards, following the same BA-to-dashboard workflow demonstrated in the WA Mining project, enabling future stakeholders to understand treatment utilisation patterns across geography and population subgroups.

- Repository: github.com/tonynguyen1292/Healthcare (the repository is in active development; README and full analysis artefacts to be added once SQL modelling and dashboard phases are complete).

Person Retrieval / Re-Identification Model – Analytics & Evaluation

Python, PyTorch, TensorBoard, Docker, Git | Personal Project | 2024

- Implemented the PCB (Part-based Convolutional Baseline) model for person re-identification, reproducing and extending the approach from the paper "Beyond Part Models: Person Retrieval with Refined Part Pooling".
- Structured the codebase into modular components (bpm, dataset, model, utils, script, resnet50-docker) to separate data loading, model architecture, training logic, and evaluation, demonstrating understanding of software architecture and maintainability.
- Trained and evaluated the model on three benchmark ReID datasets (Market1501, DukeMTMC-reID, CUHK03), achieving Rank-1/mAP results of 92.87%/78.54% on Market1501 and 84.47%/69.94% on DukeMTMC-reID using independent 1x1 convolution layers for part stripes.
- Configured evaluation using standard CMC and mAP metrics, with optional re-ranking (R.R.) to improve retrieval accuracy; applied TensorBoard for training visualisation and Docker for environment reproducibility.
- Documented the experimental setup, hyperparameters, and results in a structured README, enabling other developers to reproduce the pipeline and compare against paper baselines — a practice that reflects the same documentation discipline needed for BRDs and functional specifications in BA work.
- Repository: github.com/tonynguyen1292/Person-Retrieval

NBCC Diploma of Cybersecurity Capstone – Red vs Blue Simulation

Cybersecurity, Incident Response, Digital Forensics | Capstone Team Project | 2021

- Completed a two-phase capstone simulating real-world offensive and defensive cybersecurity operations in a team environment.
- In the **Red Team** phase, performed reconnaissance, scanning, and controlled attack simulations to identify vulnerabilities and test system resilience.
- In the **Blue Team** phase, investigated suspicious activity, collected digital evidence, and applied forensic techniques to support incident response and defence.
- Documented findings, coordinated team roles, and communicated risk observations and evidence-based conclusions under time constraints.
- Built practical experience in threat analysis, evidence handling, and structured problem solving that translates well to business analysis and process improvement work.

Tools and techniques used

- **Red Team:** Nmap, Metasploit, Burp Suite, Social Engineer Toolkit (SET), Mimikatz.

- **Blue Team:** Splunk, Microsoft Defender, Snort, Suricata, Wireshark, Volatility.

EDUCATION

Master of Computer Science

Edith Cowan University, Joondalup, Western Australia | Feb 2023 – Feb 2025

- GPA: 3.458
- Relevant coursework: Systems analysis, database design, project management principles.

Cybersecurity Diploma

New Brunswick Community College, Saint John, New Brunswick, Canada | Sep 2020 – Jun 2021

- GPA: 3.573/4.0
- Relevant coursework: Systems administration and enterprise IT environment, project execution, and IT governance

Bachelor of Computer Science

University of Science, VNU-HCM, Ho Chi Minh City, Vietnam | Oct 2014 – Jan 2020

- GPA: 3.29/4.0
- Relevant coursework: Software engineering, analysis and design, database systems, data structures, technical writing, communication management.

PROFESSIONAL DEVELOPMENT

- ACS Professional Year in IT – in progress (Nov 2025 – present).
- Entry Certificate in Business Analysis (ECBA), IIBA – issued July 2026.
- “Step Into SQL with Jupyter Notebooks” – Coursera, issued May 2026.

PORTFOLIO & ARTEFACTS

- WA Mining Operations Dashboard (BRD, data dictionary, SQL, Power BI dashboard, recommendation memo): notion.so/wa-mining-portfolio.
- GitHub portfolio: github.com/tonynguyen1292 (WA_Mining, Person-Retrieval, Healthcare).
